Claims 16-24 have been withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 3.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7 and 9-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Apps ('273).

Apps discloses a stackable crate comprising a side wall formed so that at least a portion of an opening in the crate has a larger dimension than the bottom surface and a drag rail (one of the rails at the bottom periphery of the crate) formed on the underside portion of the bottom surface, wherein a portion (portion 100 of the side wall) of the inner surface of the side wall is formed to reduce the dimension of the crate opening in at least one selected area so as to provide a tighter fit with a drag rail of a crate stacked thereon.

Claims 1-7 and 9-15 rejected under 35 U.S.C. 102(b) as being anticipated by Apps et al. ('532) (Apps).

Apps discloses a stackable crate comprising a side wall formed so that at least a portion of an opening in the crate has a larger dimension than the bottom surface and a drag rail (one of the rails at the bottom periphery of the crate) formed on the underside portion of the bottom surface, wherein a portion (inner edge portion of spaced reinforcing posts 79) of the inner surface

Art Unit: 3727

of the side wall is formed to reduce the dimension of the crate opening in at least one selected area so as to provide a tighter fit with a drag rail of a crate stacked thereon.

Claims 1-6 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Wise.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Apps ('273) or Apps et al. ('532).

Apps and Apps et al. each disclose the invention except for the inner side wall surface being formed as a variable radius blend into the bottom surface sufficient to position a portion of the side wall over the drag rail. Rounded inside corners between the bottom surface and side wall surface are generally well known in plastic molded containers in order to alleviate stress concentration at the bottom corner junction with the side wall. It would have been obvious to add a variable radius blend at the bottom/ side wall juncture in order to reduce stress concentration to add to the durability and strength of the crate.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
